NAILFILES MADE FOR YOU

DBT KIEHL is your partner for tools and nailfiles for naildesign. We produce all manicure instruments according to your requirements and with your brand.

Starting from only 1000 pcs per file on, we realise your individual professional duraboard in regard of shape, grit, colour and logo.

If you need smaller quantities, ask for our stock range of the most popular files and instruments for naildesign.

We make your nailfile

Step 3

Select your center

SELECT YOUR OWN CENTER

You can separate the nailfiles of your range by giving an individual center colour to each model. The standard center is white in 1,4 mm thickness. If a very hard file is required you can upgrade your file to a thickness of 1,8 mm. For maximum stability you can select a wooden center. In this case the foam-buffer between foil and center is left away.

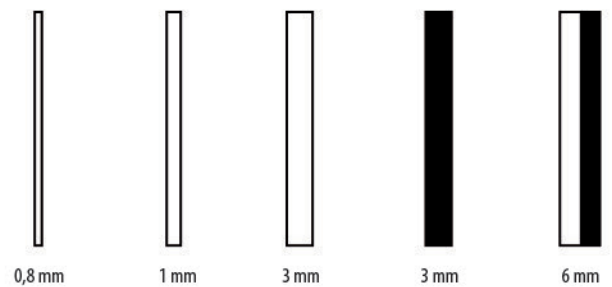

We make your nailfile

Step 4

Select your foam buffer

SELECT YOUR OWN FOAM BUFFER

For their comfortable feeling, buffer nailfiles have a foam buffer between the plastic-center and the foil. You can select the thickness of this foam according to your own requirements. The standard thickness is 1 mm on each side of the center.

We make your nailfile

Step 5

Select your print

HAVE YOUR NAILFILE PRINTED

We can print each file with an individual motif as e.g. a logo from only 1000 pcs on. This can be realised in one colour or in a four-colour print. Alternatively, we can print a picture of your choice on the complete foil-sheet before the cutting for only slightly higher minimums. We only need a high-resolution picture with the motif of your choice.

We also have the below choice of motives available from 1000 pcs.

**We make your
nailfile**
Step 6
Select your packing

WHICH PACKING DO YOU NEED?

Without further indication, we will send your nailfiles bulk packed, that means in boxes of 1000 pcs. per item. Alternatively you can select among our choice of packings. We can either shrink your files into a skinning foil. The quantity of files shrunk together depends on your choice from 1 pc to 50 pcs. (1) If you want to have a more upscale packing we can offer you a soft foil packing (2) with Eurohole or a solid transparent packing (3). We can also print a backingcard with your design or add a sticker with barcode to each type of packing.

BOXES

We also provide injected boxes for the nailfile shapes Profi (187p), Baby and Square (187s). The ideal way of keeping the file in a handbag.

The boxes can be injected in your individual colour and can as well be printed with your logo.

The ornamental file „Pigalle“ (187rp) in square shape with arabesque print in silver is a stock line.

Even more nailfiles
We also offer all common complementary files for naildesign

COMPLETE YOUR RANGE

We also offer emery boards in various sizes and colours, used very often as single use files for natural nails or for retail.

For the nailpreparation we offer you the classic white and black blocks in several grits. These can also be printed with your logo if required.

Types of Nailfiles

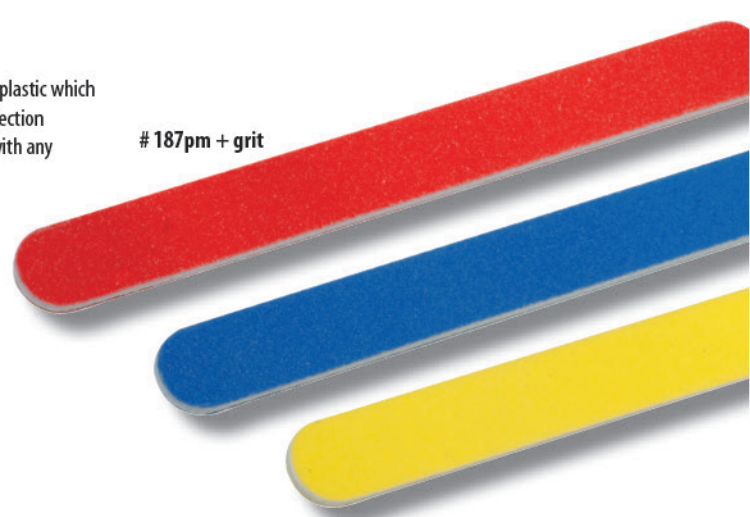

The right file for each application

MYLAR BOARDS

These nailfiles are made with a transparent abrasive plastic which is resistant to water. The files can be soaked in disinfection liquids. We can print the material from its backside with any colour you like as well as with a picture.

The traditional colour scheme for mylar files is
ref - for grit 80
blue - for grit 120
yellow - for grit 240

187pm + grit

DURABOARDS

The most common material for nailfiles. This washable, plastified abrasive paper is available in many grits and colours on choice. Little corundum crystals are fixed on a paper underground by a plastified surface.

Our professional quality range provides a long lifetime and can be cleaned with a disinfection spray.

187p + grit

POLISHING FILES

We offer the traditional 3-way polishing foils as well as the modern faster working 2-way foils („Superbuffer“) on choice. Generally we can use all our cutting forms also for realising polishing files. The most popular versions however are hold on stock for your convenience.

187ps + grit

FOAMIE FILES

This new abrasive material has the grit directly glued on the foam. There is no paper or foil inbetween any more that would reduce the elasticity of the abrasive surface. Consequently the surface adaptes perfectly to the nailsurface during the filing. The files feel less abrasive and very comfortable to the customer. They are ideal for preparing or smoothing the nail surface. We offer four different grits on choice. Each of them has a particular colour.

RED - GRIT 80

PURPLE - GRIT 120

GREEN - GRIT 180

GREY - GRIT 100 AND 180

WHITE - GRIT 320 AND 3000

Additionally we offer several additional grits in colour light-grey or light-blue.

High quality instruments

A short selection of our large range of instruments.

New wirespring nippers

Our new cuticle- and nailnippers with a stainless wire-spring combine the outstanding sharpness of all Kiehl nippers with a minimal necessary power. The spring enables the professional to use the instrument for a long time without the hand getting tired.

Ultracut Nailnippers

3038s 11 5

A newly developed nailnipper that cuts nails as butter thanks to the optimised proportions and a new way of sharpening. The blade is ultrasharp with the ideal shape for maximum sharpness and due to its short angles, the pressure arriving to the nail is maximised. For naildesign and podiatry.

The newly shaped blade offers a very comfortable and ergonomic work for the professional.
